Suitable for people with disabilities

You may try many new foods over time

Ordering food online or on the phone is quite simple

Less risk to get infected by diseases

Good for shy people

Tech
A lot of restaurant technology goes into running a successful food delivery service.

If your restaurant doesn't already offer delivery service, here are some of the top resources you'll need to get you up to speed as fast as possible

Delivery packaging
You may already have takeout food packaging for doggy bags and pick up orders, but you'll need to stock up when you begin offering delivery. You may also need to upgrade to containers that ensure that items don't spill during delivery and food temperature stays even

What You Need to Implement Food Delivery Service at Your Restaurant

Staff
Food delivery requires staff. If you decide to handle deliveries in-house, you'll need:

-

Labor
For in-house delivery, you'll need to pay your drivers.

-

Cost
These are some of the costs you can expect to face if you choose to implement an in-house food delivery service at your restaurant. If you choose to go with a third-party option, each provider offers unique rates.

Food delivery is a long-term investment, which is why it's important to do your research before deciding if it's right for your business.

But it has only grown in past years and will likely continue to be an important revenue stream as dining rooms continue to operate at reduced capacity. Deciding whether or not to become a restaurant with delivery service is a choice that you should make based on your business' needs, resources, venue type, customer base, and location.

Why to choose food delivery software?

Gaining increasing importance and attention , delivery management is inclusive of effective capturing and allotting orders, organizing , managing and supervising your product of service

60 % order food online through Food ordering apps

30% order online

More than

Having a comprehensive delivery management system in place is the need of the hour for companies

70%- 90% scheduled and instant deliveries are the core essentials of business

In modern food industry

With on-demand delivery culture being the order of the day , companies have to adopt various strategies for improving their operations

Chalenges that we faced

Every chalenge that we faced we tried to look for in Flutter documentation (documentation was poorly written) and solved some problems by just googling it.

1 Implementation of map; First we tried to add Open Street map, because it was free to use and it was easy to add custom markers to map, but then it did not look so cool and some packages (geocoding, location; to get user location and text address) did not work well with that map. So we decided to move to google map and everything were ok except custom markers, and we thought that this can be sacrificed.

2 Food cart implementation was really hard, we tried to look for external packages to create it, but we did not find anything so we implemented all logic by our own, using Provider package to save state of cart.
